WEBINAR

Moderator:

Janusz Diemko(ACA, ACT)

Payments Strategy Consultant, Investor and mentor

Currently an angel investor in fintech businesses currently invested and advising around 10 businesses . He has been a Partner / Investor in Hedgehog Angel Fund investing in early stage ecommerce and ICT businesses in Poland since 2015. He holds supervisory Board Memberships; at Ipopema Securities, and IQ Partners investment fund, both listed in Warsaw.

Janusz has 24 years experience in payments in Europe, Ukraine and Russia; working directly in payments business such as Euronet, First Data and PEP (Polskie ePłatności S.A. a Polish acquirer) and as a payment consultant and advisor working on M&A projects, financing support and strategic and market analyses.

Simon Wood

Senior International Partner Manager @

s.wood@ccv.eu

Simon is a payments specialist who has been working in the parking sector for over 10 years. Closely involved in the launch of mobile phone parking payment in the UK and subsequently working with suppliers to the largest European parking hardware manufacturers, Simon is well placed to understand the requirements of the sector during this period of evolution. The role of payment management has moved from one of pure money collection to where it can provide a gateway to enhanced understanding of drivers by providers and add value at what is often both the first & last point of contact during a driver's day.

- C2P - Joint venture with PAX
- Extensive partner network

Expert provider to self-service markets

Parking

Public Transport

Fuel & Service Stations

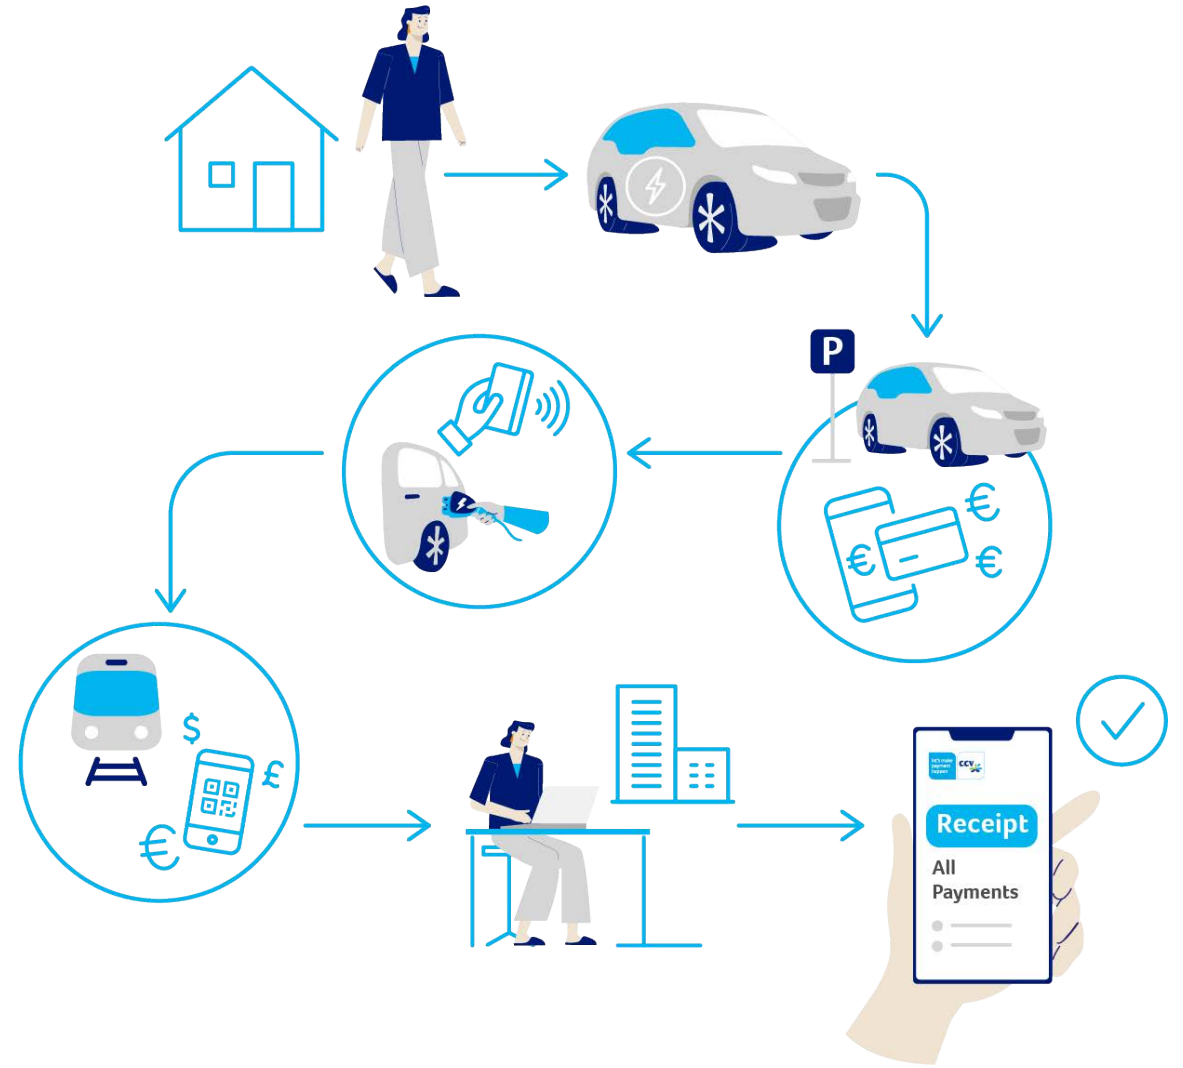

EV- Charging

Vending

We Make Payment Happen

At CCV, we facilitate knowledge, transactions, technical solutions and payment hardware to deliver seamless end-to-end payments at every touchpoint of a customer journey.

Digital integration of payments in mobility

Before departure

- Using a on-line planning tool, either at PC or mobile.
- Payment **card registered** on site for service payment
- **Tokenised card number** stored to use as personal identifier later in the day.
- Where final payment value is not known transaction **pre-
authorisation** can be useful.

On arrival at carpark

- Card is read and tokenised before sending to booking engine to match against reservation.
- **Add-value** by personalising the arrival experience
- Card read can be **used for identification** of pre-booked users or to mark the arrival of occasional users.

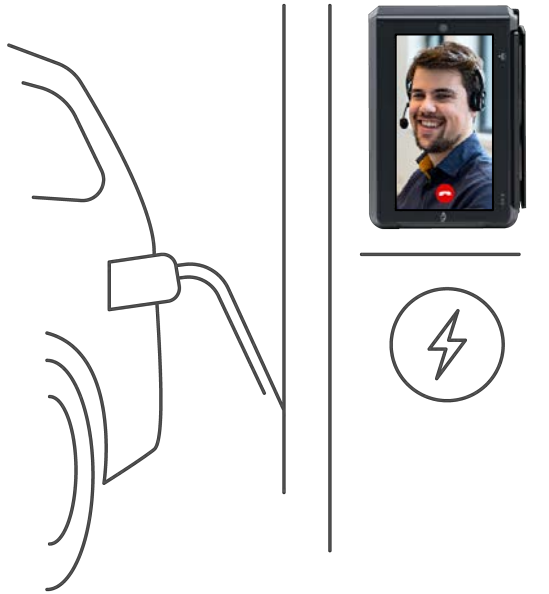

At the charger

- Card read can be used for **identification of pre-booked users** and to ensure that others do not activate a charging session.
- **Add-value by** personalising the arrival experience and working with 3rd parties to enhance their experience.

Add value to every interaction

- Integrate with 3rd parties to present targeted advertising & promotions.
- Enhance driver experience and generate additional income
- Leverage IM30 fully addressable screen to promote related services
- Upload voucher to user phones or just display advertising.

Entering the station

- Use booking reference on phone or payment card to identify a passenger
- Add convenience by **avoiding physical tickets**
- **Add value** by helping with navigation

Digitally enhanced retail opportunity

- Use contactless card to purchase
- Promote additional opportunities at associated locations
- Tailor offers using CRM data

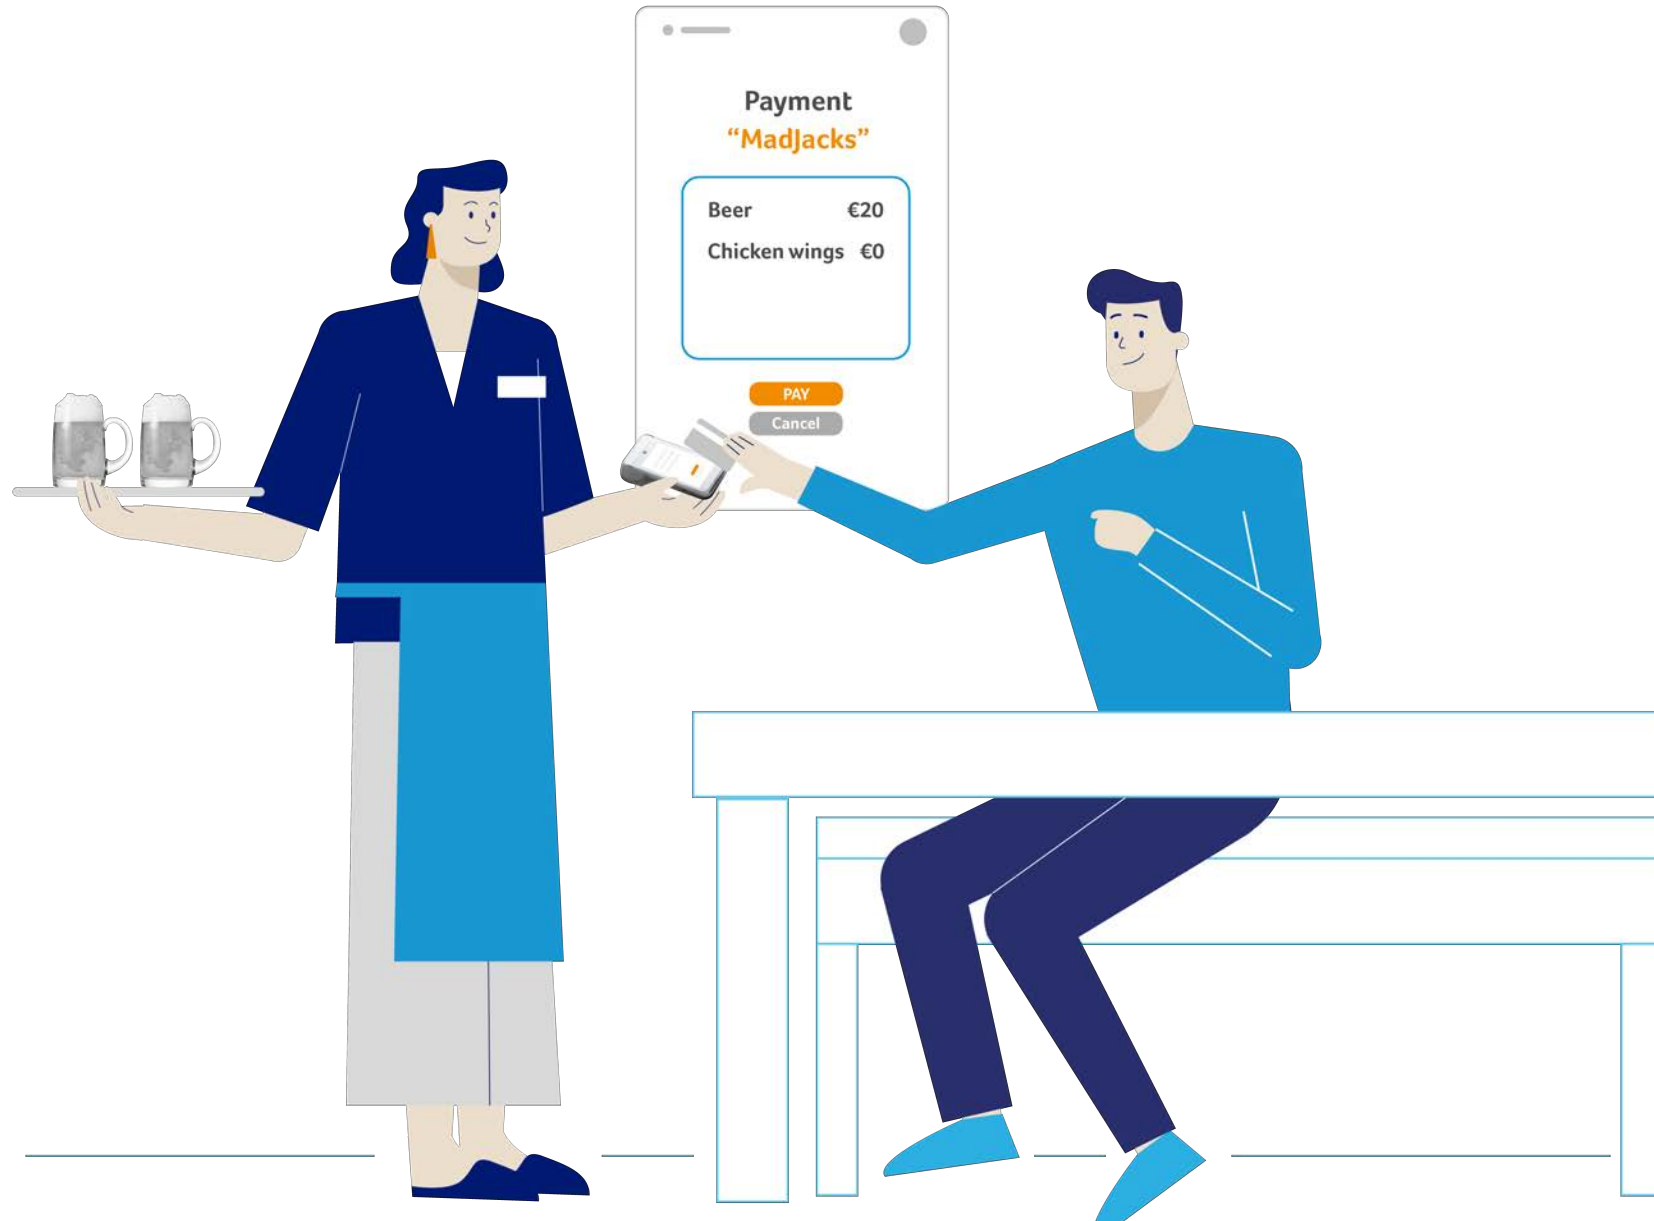

Redeem vouchers or loyalty scheme points

- Use **customised offers** to enhance the user experience
- Reward activity or incentivise actions
- In-house or 3rd party providers
- Use IM30 code scanner to read **text, QR code or barcode.**

Reward activity

- Follow known users across locations or time
- Use card tokenisation to **build customer relationship** and loyalty
- Scheme tokenisation enabling recognition of card tokens across retail organisations.

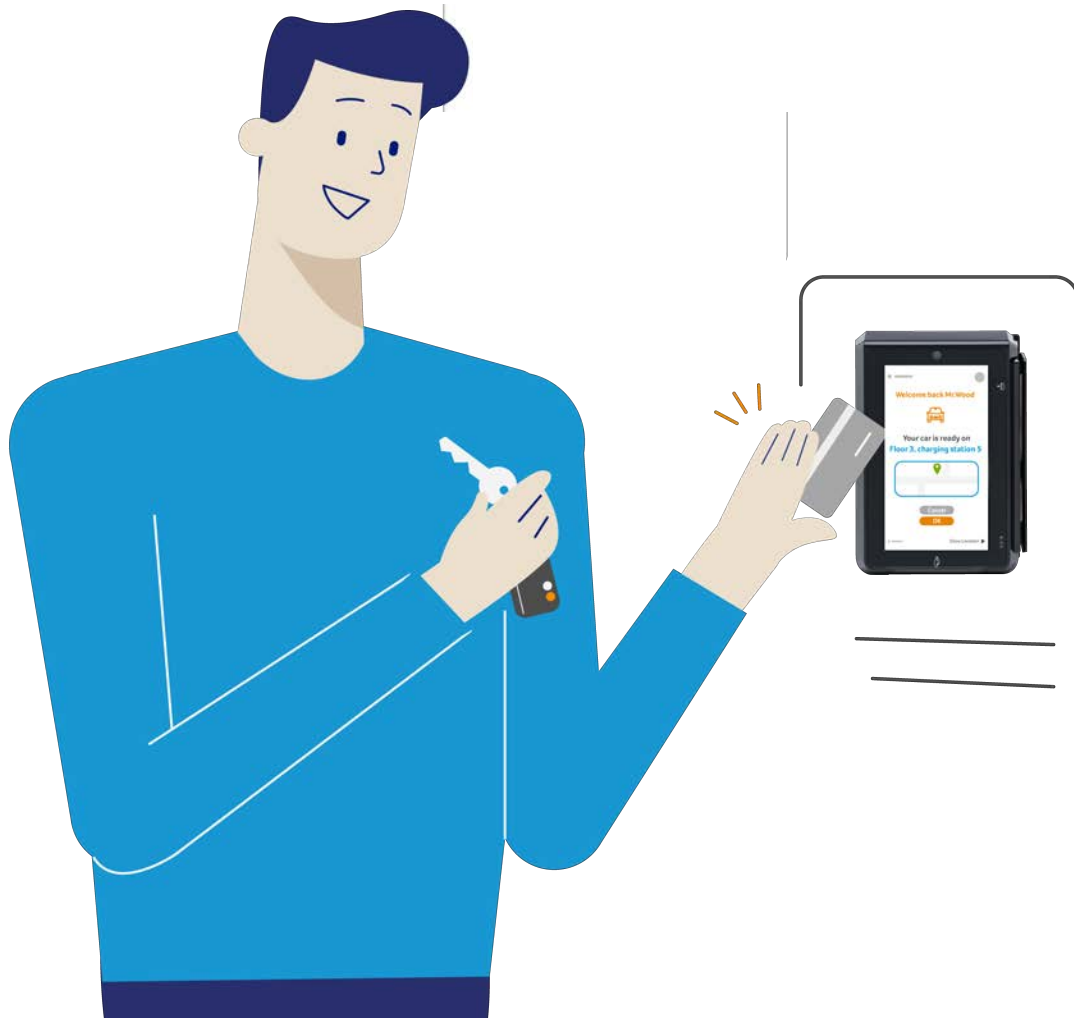

Convenience of flexibility

- Provide choice to enhance user interaction
- Payment card linked to booking made & used to recall right to travel rights
- Leverage value of a card as the identifier
- Card can also be used for enforcement – no more lost tickets

Identify legitimate users to enhance the experience

- Manage pedestrian access away from the vehicle
- **Flexibility of identifier**, card, phone (or even ticket) scanned by smart terminal
- Card details tokenised by IM30 and shared with CRM/booking system if pre booked
- If occasional user – from entry barrier read

Secure identity of user

- Use payment card to ensure only authorised end a charging session.
- Confirm fee for both parking and EV
- Partial reversal of pre-authorisation amount, **only correct fee hits driver account.**
- Receipt from booking site or **CCV eReceipt server**

How to make these changes work to your advantage?

Our
payment
solutions
can help!

CCV IM30

Make it yours

Virtual PINpad

Optimizes use of space.
